01 Dominion PX iPDU

Intelligent power management solutions

Know more. Manage better.

The Dominion PX is an intelligent power management solution that helps you improve efficiency in your data centre, with remote outlet-level monitoring and management, remote power cycling, intuitive GUI management and 256-bit AES encryption.

With the Dominion PX:

- Emergencies can be resolved with remote serial and TCP/IP access to outlet-level switching, improving MTTR.
- Capacity planning is simplified with unit-level and outlet-level power utilization information.
- Staff can gather detailed power information to improve uptime and productivity.
- Travel costs and time can be saved with remote power cycling and monitoring.

Information provided by the Dominion PX - displayed at the strip via an LED display, and remotely through a Web browser - can be used to improve capacity planning through power consumption information for both the PDU and individual receptacle. Precise, outlet-level access and control allows users to reboot attached devices.

Whether used alone or integrated with other Raritan solutions, the intelligent Dominion PX offers secure access with 256-bit AES encryption and strong passwords. Dominion PX supports advanced authorization options including outlet-level permissions and LDAP/S, RADIUS and Active Directory. Flexible management interfaces support HTTP, HTTPS, IPMI, SMASH-CLP, SSH, Telnet and SNMP, as well as user-configurable, outlet-level delays for power-sequencing

Dominion PX Remote Power Management Solutions can be integrated with the following Raritan solutions:

- KVM switches: Dominion KX II and Paragon II
- Secure console servers: Dominion SX
- Centralized IT infrastructure management: CommandCenter Secure Gateway.
- Power IQ Data Centre Energy Management Software

02 Network Cables

CAT5e and CAT6 coloured LAN cables

Say you have to install a new computer & phone system in your office, plus there is already a modem, router and security alarm connected. If you don't plan ahead, your server room could quickly become a mess & start to look like a bowl of spaghetti.

The easiest way to coordinate and uniform anything is by using visual aids, the most common being numbers. When it comes to things like cables, numbers don't really work, so we use colours instead.

Now you can have a colour cable dedicated to any one person, device or application (e.g. Phone Lines = Blue, Data = Purple, Alarm = Red etc.). Having your systems set up in this way can make a world of difference when unforeseen technical problems arise.

Visit us on the web @ www.dueltek.com.au and see the new **LOW PRICES** on all network products

Features & Benefits:

- 10 Vibrant Colours
- 0.25cm to 50 Metre Lengths
- RoHS Compliant
- Pre-terminated
- Durable Strain Relief Mouldings
- Snagless Connectors
- 50-Micron Gold Plated RJ45
- 500 MHz Frequency (CAT6) - 350 MHz (CAT5e)
- Lifetime Warranty

03 On-Line UPS

When you need complete protection!

Complete Power Solution™

Most companies have to rely on computers to take care of business; however, when your systems shut down and the Internet gets disconnected due to power failure, your business may suffer an enormous downturn in productivity and possible data loss.

While we are all a lot more dependent upon computers, the reliability of our networks cannot be guaranteed from power surges or black outs. Because of this, Powercom designed a series of UPS products to combat the growing demand for disaster prevention.

The Vanguard Series UPS is a tried and tested online UPS system available in tower and rack formats from as small as 1RU. Power ratings range from 600va up to 15kVA and are available in either single phase or three phase input / single phase output. The Vanguard series is one of the most versatile on the market and can be customised for just about any scenario.

Features & Specifications:

- Hot swappable batteries
- Emergency Power Off function
- LCD display front panel
- SNMP Manageability
- Wide input voltage range
- Power factor correction
- True on-line technology provides total power protection
- Pure sine-wave output with less than 3% THD
- 3 Year Battery Warranty
- 3 Year System Warranty
- 240 Volt to meet Australian Standards
